

S MINI
#SAFEAIRTOGO

*APCO sanitization technology

Through the most advanced methods, it decomposes contaminants into H_2O , CO_2 and other inorganic molecules, returning to the environment without any pollution.

It can even eliminate germs very effectively during high speed air flow and on surface to even further remove odors, smell caused by smoke.

**APCO, Advanced PhotoChemical Oxidation*

3 patented key designs

High-power VUV + UVC Dual ultraviolet lights

8x powerful than traditional UVC

High efficiency optical reflection structure

Creates $>650 \text{ cm}^2$ (100 inch^2) of reflection area.

QuAngel nano photocatalyst (NPC) coating

Allows the surface-bound radicals nearly 360° of exposure

Partnered with QuAngel Bio 

3 phases sanitization

1. Kills 99,9% of germs in 0.026 sec
2. Sanitizes the air and surfaces
3. Clean and safe
